Noatum Logistics

CargoWise end-to-end process questions for our session

CargoWise process — questions

What this is. We are building a customer portal where Noatum customers log in to request quotes, track shipments, download documents and see invoices. CargoWise stays the system your teams work in — the portal reads from it and passes customer requests into it. These questions are about how the work actually happens, not about technology.

What would help most. Please tick the questions you are the right person for, and for the others type who I should ask. The boxes and fields in this PDF are fillable — open it in Acrobat or a browser, tick, and send it back. No need to write answers; we can talk them through.

#	QUESTION	YOU?	SOMEONE ELSE — WHO?
CUSTOMERS IN CARGOWISE			
1	**Which party on a shipment does Noatum treat as "the customer"? A shipment names a shipper, a consignee, sometimes a notify party and an agent, plus the party we invoice. Which of those should give a company the right to see that shipment in the portal? This single rule decides who sees what, so it is the one I most need confirmed.**	☐	
2	How is a customer company set up in CargoWise, and what does that record hold?	☐	
3	If a customer has several offices, are they separate records? Is there any link between them, such as a parent or related organisation?	☐	
4	Is there a field that separates a client from a carrier, an agent or a supplier?	☐	
5	Can two Noatum customers be on the same shipment, for example when we handle both the shipper and the consignee? How often does that happen?	☐	
QUOTES			
6	Walk me through a quote from the moment a customer asks: who receives it, where is it entered, what is mandatory?	☐	
7	**Which lanes have rates ready so a price can be given immediately, and which always need a person? Roughly what proportion, and where do the rates actually live?**	☐	
8	Does a quote hold cost and margin as well as the sell price, and who may see the cost side?	☐	
9	Is there an approval step before a quote goes out, and does it depend on value?	☐	
10	How is a quote sent to the customer today, how long is it valid, and what happens when the customer asks for a change?	☐	
11	What do customers most often get wrong or leave out when they ask for a price?	☐	
SHIPMENTS AND MILESTONES			
12	Walk me through a sea FCL shipment from booking to delivery — every step where somebody records that something happened.	☐	
13	The same for an air shipment. Where does it differ?	☐	
14	**Which five milestones would stop the phone ringing if customers could see them themselves?**	☐	
15	**Which events are internal only and must never be shown to a customer?**	☐	
16	How quickly after something happens does it appear in CargoWise? Where does carrier information come from today?	☐	
17	When something goes wrong — delay, roll-over, customs hold — how do you find out, and how does the customer find out?	☐	

Noatum Logistics

CargoWise end-to-end process questions for our session

DOCUMENTS AND INVOICES			
18	What documents appear across a shipment, and at what point does each one arrive?	☐	
19	Which document types must never be visible to a customer?	☐	
20	**When is an invoice raised, and how is it decided who gets billed when several parties are on one shipment?**	☐	
21	Can two parties on the same shipment each receive their own invoice?	☐	
22	Which charge codes appear most often, and do customers understand them or call to ask?	☐	
BOOKING			
23	How does an accepted quote become a booking — a conversion in CargoWise, or does someone re-key it?	☐	
24	What must be present before a shipment can start, and until what point can a booking be cancelled or changed without cost?	☐	
CLAIMS AND MANUAL WORK			
25	How does a customer raise a claim today, and where is it recorded?	☐	
26	Where does your team re-key the same information into two places, and which customer enquiries take the most time?	☐	
ONE NEW QUESTION FROM THE BUSINESS			
27	There is interest in letting an internal user price a customer's request in the portal instead of logging into CargoWise, with the result syncing back to CargoWise. Nothing is decided. Would your pricing people use a second screen, and what would make it better for them than CargoWise?	☐	

Things that would help, whenever convenient

- The event and milestone code list for Air and Sea, marking which are internal only
- The document type list, marking those that must never be customer-visible
- The charge code list with plain-language descriptions
- A sample quote and a sample invoice as the customer receives them today
- The name of the right person in the CW Centre of Competence for integration configuration, and who owns rates for the pilot branch

If we only get through a few, the ones in red are what I most need: 1, 7, 14, 15 and 20.
