Noatum Logistics

Customer onboarding flow
for your confirmation

How a customer joins the portal

Nobody signs up on their own. Our team sets the company up from the records we already hold in CargoWise, then the company sets up its own people. Example used throughout: **Gulf Fresh Trading**, Dubai office, served by the Noatum Dubai branch.

From then on, with nobody doing anything

Every new shipment our Dubai team creates for this customer appears in their portal · milestones, documents and invoices follow automatically
Each office sees only the invoices addressed to it · a shipment shared with another Noatum customer is visible to both, but the paperwork stays private
Adding another office or another customer later is the same four steps — set-up, not development

Noatum does it · The customer does it · CargoWise, read only · The portal does it automatically

The same flow, step by step

	Who	What happens	Agreed
1	**Noatum Customer Success**	**Search the company in the CargoWise list.** The portal imports that list daily, so we type the company name and the record comes up. Nothing is created at this point.	☐
2	**Noatum Customer Success**	**Select the offices that belong to this customer.** Tick the Dubai office; leave Riyadh out of the pilot. These selections are what give the customer access to their own cargo, so a short reason is recorded with them. *Open point: do you want a second colleague to approve this?*	☐
3	**Noatum Customer Success**	**Add the customer.** Company name and country are already filled in from the CargoWise record. We add the tier, the company email domain, and which features are switched on, then confirm. The whole action is recorded.	☐
—	**Automatic**	**Their history appears.** The portal goes over the shipments and invoices it already holds and makes the ones belonging to this customer visible to them, before anyone logs in.	☐
4	**Noatum Customer Success**	**Invite their first administrator.** One named person at the customer, on their company email domain. The portal sends a branded email with a secure single-use link that expires.	☐
5	**Customer administrator**	**Accepts and logs in.** Signs in with their Microsoft company account, their own company sign-on, or an email-and-password account with two-step verification. Microsoft handles all of this; the email must match the invitation.	☐
6	**Customer administrator**	**Invites colleagues and gives each a role:** track only, quoting and booking, finance, analyst, claims, or another administrator. Only their own company email addresses. Noatum is no longer involved.	☐
7	**Customer users**	**Ready to work.** Fill the address book, save quote templates, set alert preferences, request the first quote.	☐

Onboarding one customer is a few minutes of screen work. The waiting is on the human side: the customer nominating an administrator, and that person accepting.

Three things worth knowing

Nobody registers themselves

There is no sign-up page. A company joins because we onboard it; a person joins because someone invited them. Anyone can still use public tracking and the CO2 calculator without an account.

We do not re-type the customer

The company already exists in CargoWise. We import that list daily, search it, and pick the right offices. Only the portal-specific settings — tier, email domain, features — are entered by hand.

Growing is set-up, not development

Adding another office, another customer, or another branch is the same few screens. Features are switched on customer by customer.

What we need you to confirm

- The flow above is how customer onboarding should work.
- **Second approver:** should connecting a customer to its CargoWise records need a second colleague to approve, or is one person with a full audit trail enough?
- **External invitees:** may a customer's administrator invite someone outside their own company email domain, such as an agent or consultant? Our proposal is no, with Noatum able to make exceptions.
- **Who does this at Noatum:** which team and which named people set customers up in the portal?
- **Pilot:** which customer, which of their offices, and which Noatum branch do we start with?
